## Agriculture Mapping

ANDAIR specialises in creating aerial mapping products, using the latest drone technology. Alongside we offer amazing aerial photography that showcases your property and provides that unique birds-eye view. We can create the following mapping products:

- Orthomosaic Maps
- Digital Elevation Models
- 3D Models
- Point Clouds
- NDVI Maps

We can map from just a few acres to 1000+ acres.

## Uses for drones on the farm

Drones provide farmers a wide range of capabilities, these include, but not limited to;

- Asset inspections
- Fence checks
- Livestock monitoring
- Livestock health checks
- Mustering
- Damage inspections
- Precision mapping
- Civil engineering
- Dam level checks
- Bore checks
- Bird scaring
- Feral animal spotting

## Drone Equipment & Training

ANDAIR uses and recommends the DJI series of drones. These drones are very user friendly to operate and learn to fly. Maintenance is minimal and their capabilities are amazing. Teamed up with third party software, these drones prove a great advantage on any type of farm.

ANDAIR sells the complete range of DJI products, including drones, cameras and sensors, spare batteries, spare parts and a range of other after-market products.

New to drones? ANDAIR also offers half and full day courses to teach you how to operate your drone safely and responsibly, including practical advice for on the farm activities. We host our courses monthly near Toowoomba or on arrangement we can come to you.
