## Mapping Products

ANDAIR specialises in creating aerial mapping products, using the latest drone technology. Alongside we offer amazing aerial photography that showcases your project and provides that unique birds-eye view. We can create the following mapping products:

- Orthomosaic Maps
- Digital Elevation Models
- 3D Models
- Point Clouds
- NDVI Maps

We can map from just a few acres to 1000+ acres.

## Experience

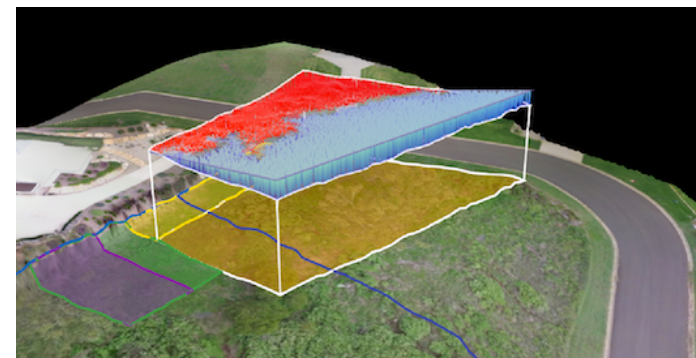

The team at ANDAIR have conducted mapping activities at various sites around Australia, including;

- Commercial Land Development
- Real Estate Development
- Construction sites
- Quarries
- Water Courses
- Environmental Parks
- Defence Land
- Bridge Infrastructure
- Cemeteries
- Dams
- Agriculture

## Equipment

ANDAIR uses commercial off the shelf drones, custom built fixed wing drones with various cameras and sensors, combined with state of the art Ground Control Point technologies. This enables us to deliver highly accurate mapping products.

ANDAIR uses the online Propeller Aero software, an Australian based company. This enables us to process large volumes of data and the resulting products are hosted online, where we can invite the customer in to the project for further analysis and sharing. ANDAIR staff provide coaching and ongoing assistance if required in the use of this software. Mapping products are generally available within 48hrs of being flown.
